EDUCATIONAL PROGRAMMES AND INNITIATIVES

2010 **Indian Antenna Week** (IAW, as IEEE AP-S sponsored International Summer School) – was designed and introduced by Prof. Guha in 2010 as an annual international antenna workshop with the direct association of and sponsorship from the IEEE AP-Society. The purpose was to train the young scientist and research students with the advanced technology and innovations.

2018 **Advanced School of Antennas** (ASA, as IEEE AP-S sponsored International Summer School) – a yearly residential summer school designed and organized at the national level (under the umbrella of IEEE) to offer a 2-credit equivalent course to a maximum of 75 young scientists, faculty members, researchers, and PG level

students from different parts of the country. Prof. Guha has served as the founder and course director for all the editions since 2018.

RESEARCH CONTRIBUTIONS

- **Introduced Defected Ground Structure (DGS)** integration techniques to planar antennas for mitigating cross-polarized radiations and mutual coupling in array elements [*IEEE AWPL*, 4, 455-458, 2005]. This has been eventually established it as an attractive and industry-qualified technique.
- **Introduced** $HEM_{12\delta}$ **as a new radiating mode** in cylindrical shaped Dielectric Resonator Antenna (DRA) and successfully resolved the challenges of its excitation by innovating a series of novel feeds [*IEEE TAP*, 60 (1), 71-77, 2012]. This overall approach enables cylindrical DRA qualified for on-chip implementation.
- **Innovated glue-free mount for Dielectric Resonator Antennas** [*IEEE AWPL*,16, 2440-2443, 2017]. This resolves the major weakness of fixing the DRA element on high-jerk platforms in air/space-borne systems.
- **Ambiguous sources of cross-polar radiations** from planar antennas have been successfully **analyzed and identified.** The pioneering solution across the skewed radiation planes has been recorded [*IEEE TAP*, 68 (6), 4950 - 4954, 2020], [*IEEE AWPL*, 19 (1), 99-103, 2020]. This enables SAR antennas much more advanced and efficient.
- **A new class** of **hybrid subarray has been introduced** [*IEEE TAP*, 69 (7), 3778 - 3787, 2021] establishing a notable advantage of engaging minimum feed networks.
- **New theory and concept** developed for 'resonance gain antenna' with futher AI-based innovations have been applied to substitute traditional Fabry-Perot cavity [*IEEE AWPL*, 20 (5) 678-682, 2021]. A unique array has been indeginiously developed in collaboration with ISRO to replace offset parabolic reflectors for Indian satellites.
